Data Analyst with hands-on experience building end-to-end data pipelines and BI dashboards in a live B2B environment. At Norsat International, built an automated HubSpot-to-Business Central pipeline (Python, GitHub Actions) that surfaced O2C insights for executive reporting — a proposal that triggered a company-wide Dataverse integration initiative after a technical proposal to the CEO. Statistics graduate (SFU). Targeting analytics engineer or BI analyst roles at growth-stage or mid-market tech companies.

Technical Skills

Languages	Python (Pandas, NumPy, Requests), SQL, R, Git
BI & Visualization	Power BI (DAX, Power Query), Tableau, Excel (VBA)
Data Engineering	ETL/ELT Pipeline Design, REST API Integration, Data Modeling, Star Schema
ERP & CRM	Microsoft Dynamics 365 Business Central, HubSpot API
Cloud & Stack	Snowflake, dbt, GitHub Actions, Azure (AZ-900)

Professional Experience

Sales Business Analyst | Norsat International — Richmond, BC Oct 2025 – Present

- Built an automated Python pipeline (Pandas, Requests) pulling HubSpot CRM and Business Central ERP data via REST APIs, eliminating 20–30 min of manual work per run; scheduled daily via GitHub Actions with anonymized output written to OneDrive for daily Power BI refresh.
- Proposed a cloud automation architecture (87.4s runtime, \$0/month within free tier); the proposal triggered a company-wide Dataverse integration initiative after presentation to the CEO, expanding scope from one team to a cross-functional data layer connecting CRM, ERP, and finance.
- Connected HubSpot deal records to BC invoice data in a single Power BI report (3-page O2C dashboard), replacing a fragmented workflow and giving the sales team end-to-end deal-to-invoice visibility for the first time.
- Identified a 78% win rate for deals closed within 90 days vs. 8% beyond 90 days via HubSpot trend analysis; presented findings to CEO and CFO as the basis for a revised sales velocity target.
- Built a 3-page Power BI dashboard for the E-commerce Initiative product line, surfacing that BUC/SSPA drives 40%+ of channel revenue; presented quarterly margin analysis to the marketing team to inform product focus.

Selected Projects

HubSpot × Business Central O2C Pipeline | Python, REST APIs, Power BI, GitHub Actions 2025–2026

- End-to-end pipeline pulling 6,600+ HubSpot deals and BC invoice records, anonymizing sensitive fields (company, salesperson, revenue), and loading to Power BI for O2C cycle analysis; automated via GitHub Actions (cron schedule + workflow_dispatch).
- Key finding: deals closed within 90 days achieve a 78% win rate vs. 8% beyond 90 days — a 9.3x gap that informed a company-wide pipeline review.

Canadian Health Spending – dbt + Snowflake | dbt Cloud, Snowflake, Tableau Public 2025

- Multi-layer dbt pipeline (staging → mart) on CIHI national health expenditure data; automated tests enforce data quality on key fields. Tableau dashboard shows per-capita spending by province 2000–2022.

Credit Risk Prediction & Scoring | Python, XGBoost, SHAP, scikit-learn 2025

- End-to-end ML pipeline with SMOTE, FICO-style scorecard (300–850 scale), and SHAP explainability. AUC 0.937 on hold-out; estimated \$10.3M loss prevention on portfolio simulation.

Certifications

IBM Data Science Professional Certificate · Deep Learning Specialization, DeepLearning.AI · dbt Fundamentals (In Progress)

Education

Simon Fraser University — B.Sc. Statistics

May 2018 – Dec 2023
